

INTERNATIONAL  
CONFERENCE

# NATURAL PLAYSPACES FOR CHILDREN

## Guapuruvu Project

### Theme/Place:

Outdoor play - Londrina / PR

### Authors:

Alex Maurício, Odete Perdomo, Laís Novaes and Gustavo Garcia.

### Context and objective:

With the resumption of in-person support, the backyard, the square, the shade of the Guapuruvu tree, and the land became the tools for learning and connections with life, unearthing the opportunity for a free, natural and playful education.

### Methodology:

Free play with and in nature, cultivating the school garden using principles of agroforestry, indigenous and rural culture. From this, the Pedagogy of Seeds was born, where children take the lead in the learning process, guided by their dreams, and share the light of knowledge in the Guaraci circle.

### Results:

Submission of a proposal by the educational community to the government for the construction of a naturalized park and community garden with an agroforestry system in the neighborhood square. Organization of the Guapuruvu Education Symposium: from the seeds to the flowering of a playful and natural education, which was attended by over 300 people.
