NATURAL PLAYSPACES FOR CHILDREN

Child and Nature: naturalized park's role in play and infant development

Theme/Place:

Greening spaces for children and youth - São Sebastião / Distrito Federal

Authors:

Mayara Souza Rodrigues
Mônica Padilha Fonseca

Context and objective:

The scientific initiation project has the goal of exploring naturalized parks in DF and building one on the Campus with children from Ludof – a project that support mother students from the school.

Methodology:

Based on studies by Péo, Carlos Neto, Tiriba, Blauth and Barros, we analyze the situation of the naturalized parks visited. Our search space is São Sebastião, on the outskirts of the Brasília-DF. We used the photographic record as a research tool.

Results:

The naturalized parks visited: Jardim Botânico, Olhos D'água and Parque do Bosque, that are shown as inspiring enclosures. And for the park's construction on our Campus, we listened to the children's wishes from Ludof and we performed student community actions for the creation of playground toys with the Instituto's own nature.
