NATURAL PLAYSPACES FOR CHILDREN

A park to play, live and dream

Theme/Place:

Greening spaces for children and youth - São Paulo / SP

Authors:

Willian Vinicius Silva, Karina dos Santos Cabral, Fabíola Matte Bergamin, Patrícia Regina dos Santos

Context and objective:

The intention was to value the park, a space for meeting people and for them to meet up with nature, as an environment where children could reach out for elements of nature, coexistence and expansion of the learning process and play.

Methodology:

We expanded the listening of school community on the dreams they had about the space. We studied, made routines more flexible, went beyond traditional toys. We brought up materialities that help children discover nature and invent games.

Results:

The new toys came with many challenges, possibilities of play, new skills, curiosities and creations, and a lot of joy! Children use the space more safely, pay attention to details. Educators also create more proposals and better understand children's languages.
