# NATURAL PLAYSPACES FOR CHILDREN

## Implementation of Naturalized Play Spaces in the surroundings of school equipment

### Theme/Place:

Greening spaces for children and youth - Mogi das Cruzes / SP

### Authors:

Claudio Marcelo de Faria Rodrigues / Fabíola de Almeida Rodrigues / Fernanda Midori Kano

### Context and objective:

Enhance the spaces around school equipment, stimulating childhood outside the walls, free play, and the integral development of the child, in a city more friendly to childhood.

### Methodology:

We work in an intersectoral way, integrating municipal teams, encouraging community belonging, stimulating listening and child involvement. We explore the characteristics of topography, the natural elements, encouraging free play and involvement with nature.

### Results:

The transformation of small urban voids, without use, into play spaces increased the coexistence of children and caregiver in public space, making these places a meeting point, leisure, and a reference in the neighborhood.

The initiative became an ongoing program, scaling interventions to other neighborhoods.
